

SUSTAINABLE PRINCETON

FREE LEAF CORRALS!

Sustainable Princeton and the Princeton Environmental Commission are seeking 50 households in the Township and Borough, 25 from each, to volunteer for a demonstration leaf corral project this fall. Each household will receive free materials and instructions for installing a backyard leaf corral; volunteers will be surveyed on their use of the corral and must be willing to allow photos of the corral to be used for publicity and educational purposes.

What is a leaf corral? The corral is a simple enclosure made from plastic fencing that is used to contain and compost leaves. The sides of the corral are typically 5' - 8' in length and leaves are piled to a height of 3' within the enclosure.

What are the benefits of leaf corrals? Leaf compost from the corral can be used as mulch or as a soil supplement in your yard or garden. Keeping leaves off the street improves safety and drainage along our roads, saves public money spent on collecting and disposing of leaves, and saves you time and effort in bagging leaves and hauling them to the street.

If you would like to volunteer for the 2010 Leaf Corral Demonstration Project, please sign up on the Sustainable Princeton website at www.sustainableprinceton.org. This project is paid for by the Princeton Environmental Commission.

Hurry! Free Leaf Corrals limited to the first 50 households!
