

# Main Replacement Project

## Gas System Modernization Program

PSE&G is starting its second Gas System Modernization Program (GSMP II) which is focused on investing in our natural gas distribution system that serves approximately 1.8 million customers. The new GSMP II program will be executed over the next five years throughout our gas service territory.

As we work in your community to replace the old gas pipes and service lines with new piping; inside gas meter sets will also need to be relocated to the outside. If you have a service line and/or a meter that needs to be replaced/relocated, you will be contacted to make a service appointment. Thank you in advance for your patience during these construction activities and we look forward to ensuring the continued safety and reliability of your gas service.
